

ROYAL DINXPERLO Strips

100 years of wire mesh expertise

Thanks to the knowledge and expertise of our highly skilled and highly motivated professionals, our 13000m² production location and our vat experience in global projects, we can create pretty much any wire mesh product you need.

Our regular mesh products can be delivered from stock and our team is always happy to help with any innovative custom made solutions you may require.

ROYAL DINXPERLO

WIRE WEAVING

Mesh cut to the correct width for immediate processing

Woven and welded metal mesh is usually produced on wide rolls. However, many applications require only a narrow strip. When customers have to cut the mesh to width themselves, this requires additional machinery, staff and an extra production step.

Royal Dinxperlo can precisely process woven and welded wire mesh into strips. The strip width is tailored to the application and the customer's subsequent processing requirements. This allows the wire mesh to be used directly in the production process.

Strips

Wire mesh has an open structure that must be carefully guided during cutting. The material must run straight through the machine and must not shift unintentionally during processing. This is particularly important for long strips and tight width tolerances.

Furthermore, the properties vary depending on the type of mesh. The material type, wire diameter, mesh aperture and woven or welded construction all influence how the mesh can be cut. A controlled process is required to achieve a consistent strip width along the entire length.

Product	Woven/welded mesh.
Application	Various applications.
Openings	Various precise sizes.
Material	Various materials.
Wire	Various wire sizes.
Properties	In accordance with customer requirements.
Delivery	Rolls or fabricated engineered parts.
Quality	Top Dutch quality. Production according to ISO 4782:1987 and ISO 9044:1999 (weaving).
